

10. Tides and Tide Time Table

The Broads' rivers are tidal and the tide rises and falls twice approximately every 25 hours. Generally the outgoing tide (the ebb) lasts longer than the incoming tide (the flood). At Great Yarmouth, where the Broads flow out the sea, the tidal effect is most noticeable and the rise and fall can be up to 2 metres. Tidal streams near Great Yarmouth can run at around 4mph but as you go further up river the tides are less noticeable.

To Calculate Low Water throughout the Broads

It is easy to work out low water at other places – simply add the hours given below to the times of low water at Great Yarmouth Yacht station listed in your tide table:

Acle	2.5 hrs	Oulton Broad	3.hrs
Beccles	3 hrs	Potter Heigham	3 hrs
Brundall	3 hrs	Reedham	1.5 hrs
Horning	3 hrs	St Olaves	1.5 hrs
Loddon	2.5hrs	Stalham	4 hrs
Ludham Bridge	3 hrs	Wroxham	3.5 hrs
Norwich	3.5 hrs		

Please note:

The times are 'clock times' and have been adjusted for BST. The times shown are approximate – tides are affected by weather and wind conditions. Cruising after dark is forbidden. You must plan your journey so as to be moored one hour before sunset. It saves time and fuel and makes less wash to go with the tide, not against it.
